Dear Hiring Manager,

I'm Mingyi. I earned my Master's in Computer Science from Simon Fraser University. I'm passionate about continuous learning and applying my knowledge to solve real-world problems in creative and effective ways.

Since graduating, I have worked as a Full Stack Developer and Data Engineer on Guizhou Meteorological Department, specializing in software development, big data processing, and database management. I focus on big data processing, and database management to help organizations handle and make sense of large volumes of information. I enjoy the challenge of designing and implementing efficient data pipelines and systems that ensure data is accessible, reliable, and optimized for analysis.

Outside of data work, I've taken on various projects where I developed React applications and Spring Boot services, wrote clean and efficient code, and turned complex data into actionable insights. The variety of projects and the constant challenges keep me motivated and excited about my work every day.

Beyond the technical side, I genuinely enjoy connecting with people. Recently, I spent two months working with AIA, one of Asia's top assurance companies, in their sales team. It was a great experience where I strengthened my communication skills and learned how to understand clients' needs, build trust, and deliver effective solutions.

I am excited to bring this mix of full-stack development, data engineering expertise, and strong interpersonal skills to future opportunities. Thank you for taking the time to learn more about me—I'd be glad to discuss how my background can contribute to your team.

Sincerely,

Mingyi Wu
